

PROJECT EXAMPLE

NHS Fife

We successfully completed extensive flat roofing works for NHS Fife following a competitive tender process.

The existing roof coverings had reached the end of their serviceable lifespan and required full replacement to ensure the long term integrity of the buildings.

Throughout the project, we worked closely with the roofing system manufacturer to ensure every stage of installation met the required specification. Regular site meetings and manufacturer led quality inspections were carried out during the works, guaranteeing a consistently high standard of workmanship.

Our scope of works on this project consisted of below,

- ▶ Erected suitable scaffolding to ensure safe access for all operatives.
- ▶ Stripped off the existing roof coverings down to the original substrate.
- ▶ Supplied and installed a new warm roof built up felt system, completed in full accordance with the manufacturer's specification.

Upon successful completion and sign off by the manufacturer, NHS Fife will be issued with a **20 year system guarantee**, providing long term assurance and protection for the new roof installation.
